

FIT5047 Assignment 1 - Marking Rubric - Version 1.0

Criteria	N 0%-49%	P 50%-59%	C 60%-69%	D 70%-79%	HD 80%-100%	% Weight
1. Performance in Q1a	ZERO if the algorithm fails to solve any evaluation instance. No partial marks!	50-59% relative cost vs. optimal	60-69% relative cost vs. optimal	70-79% relative cost vs. optimal	80-100% relative cost vs. optimal	4%
2. Performance in Q1b	ZERO if the algorithm fails to solve any evaluation instance. No partial marks!	50-59% relative performance vs. competing algorithm	60-69% relative performance vs. competing algorithm	70-79% relative performance vs. competing algorithm	80-100% relative performance vs. competing algorithm	6%
3. Performance in Q1c	ZERO if the algorithm fails to solve any evaluation instance. No partial marks!	50-59% relative score vs. competing algorithm	60-69% relative score vs. competing algorithm	70-79% relative score vs. competing algorithm	80-100% relative score vs. competing algorithm	10%
4. Performance in Q2	Quality of computed solutions < 50% of competing algorithm	50-59% relative score vs. competing algorithm	60-69% relative score vs. competing algorithm	70-79% relative score vs. competing algorithm	80-100% relative score vs. competing algorithm	35%
5. Report - Description and analysis	Incomplete or insufficient description of the approach and/or pseudocode. Related works and ideas are missing, misattributed or mischaracterised. There are few or no attempts at analysing the proposed ideas from a conceptual perspective. There are few or no	Some description of the proposed approach, some pseudocode but with notable gaps, errors or omissions. Limited or no attempt to relate the proposed ideas back to the problem at hand (i.e., why are they suitable). There is a discussion of advantages and disadvantages of the proposed ideas but	Generally clear description of the proposed approach, with pseudocode and other supporting artefacts. The proposed ideas are related back to the problem at hand. Some related ideas and prior works are mentioned but relationships among them and connections to implemented ideas	Clear description of the proposed approach, with pseudocode and other supporting artefacts. The proposed ideas are motivated and related back to the problem at hand. There is a correct discussion of related works, and these works are related back to implemented ideas.	Very clear description of the proposed approach, with pseudocode and other supporting artefacts. The proposed ideas are very clearly motivated and related back to the problem at hand. The proposed ideas are well positioned with respect to other related works. Relevant strengths	25%

	experiments. There are few or no conclusions.	there are clear gaps, errors or omissions. There are numerical experiments, although their purpose is not always clear. Limited or no attempt to analyse the results. Conclusions are limited, incorrect or omitted. incorrect conclusions.	is incorrect or unclear. Generally clear and correct discussion of the advantages and disadvantages in practice. The discussion is limited on account of few or limited examples. Generally correct theoretical analysis of proposed algorithms. However, there are notable omissions or limitations. There are numerical experiments whose purpose is generally clear. Limited discussion of the results. Limited or incorrect conclusions.	Clear and correct discussion of the advantages and disadvantages in practice with suitable examples. There are minor omissions or limitations. Correct theoretical analysis of proposed algorithms. E.g., time, space, completeness, optimality. There are minor omissions or limitations. There are experiments whose purpose is clear. Evaluations are carried out and comparisons are made vs. reference algorithms. Some discussion of the results and their significance. Conclusions are drawn but discussion is limited.	and weaknesses are clear and a taxonomic overview is established. Clear discussion of the advantages and disadvantages in practice with suitable examples. Correct theoretical analysis of proposed algorithms. Experimental evaluations have clear goals and metrics. Comparisons are made vs. suitable reference algorithms and on suitable benchmarks. Selection of baselines and benchmarks is well motivated and clear. There is a discussion of results to establish their significance and limitations. Conclusions are drawn and opportunities for further work are identified.	
6. Report - Communication skills	Hard to follow with no clear narrative. Inadequate or no separation of discussion text into	The writing has a tenuously logical narrative. Some attempt at the expected structural elements (e.g.	The text has a clear logical narrative and expected structural elements (e.g., intro, approach, analysis experiments,	The text is well structured and has a clear and logical narrative. Writing is generally	The text is well structured and has a very clear and logical narrative. Writing is accurate and	20%

	coherent sections. Writing is not accurate or articulate. Inadequate supporting materials. Inadequate or missing referencing.	Intro, approach, analysis, experiments, discussion, conclusion). Writing is not accurate or articulate most of the time. Ideas are sketched or detailed but not clearly motivated or evaluated. The document has few or no supporting materials (tables, images, pseudocode). There are citations and references but there are frequent misattributions, omissions and stylistic errors.	discussion, conclusion). Writing is not accurate or articulate most of the time. Ideas are sketched or detailed but not clearly motivated or evaluated. There are some supporting materials (tables, images, pseudocode) but not well integrated with the rest of the text. There are citations and references but with notable omissions, misattributions or stylistic errors.	accurate and articulate. Ideas are sketched, detailed and evaluated, although goals and motivations are not always clear. There is limited discussion and reflection about the degree to which the goals were achieved and the remaining gaps. The document has appropriate supporting materials that are well integrated with the rest of the text. Citations and references are used appropriately, but with some omissions or minor errors.	articulate. Ideas are motivated from analysis of the problem, then sketched, detailed and evaluated. Goals of each section are always clear. There is a discussion that reflects upon the degree to which the goals were achieved and the remaining gaps. The document is expertly structured in the style of a scientific report, including supporting materials (diagrams, tables, pseudocode) that clearly improve the quality of associated discussion. The requirements for citing and referencing are followed closely with no (or almost no) errors.
